**HIRE IT CONFIDENCE!
OC-IT PUTS ITS MONEY WHERE ITS MOUTH IS**

San Clemente, CA –March 9, 2010 -- OC-IT.com (OC-IT) branched off from its former company Lightning Technology, Inc. (Lightning) to maintain its leadership in Orange County, CA for cutting edge Information Technology (IT) services and network security. The new company has launched in conjunction with advertising and marketing, website, and social media campaigns.

"OC-IT is not just another 'turn-key affordable computer service provider,' but an IT company that has provided over 13 years of old-fashioned customer service that meets cutting edge technology," said Matt Lindley, Director of IT Services for OC-IT.

OC-IT is a result of the vast growth that Lightning's IT support services have undergone in the last couple years. Michael Westcott, CEO of Lightning and OC-IT, felt it best to have a set of highly-trained engineers whose sole purpose it is to consistently provide immediate response to businesses for IT support, quality managed service, and network security programs.

Westcott: "In business, time is of the essence. Businesses cannot afford to lose time and be without their computers and networks, especially in today's economy. It just amazes me when IT companies don't respond, show up late, or bill for work that a client is unsatisfied with. Enough is enough!...when there is a computer problem it's important to get it done right and done fast."

OC-IT has a proven track record and "puts its money where its mouth is," guaranteeing a two-hour response time (including weekends and after hours).

OC-IT does more than simply fix computers and eliminate computer problems; the company partners with its' clients who are typically businesses with 10 to 50 users in business service sectors, non-profit, education, and government agencies.

OC-IT Services Include:

- Voice Over IP (VoIP) and Hosted Services
- Proactive Monitoring and Managed Services
- Reactive Services and Break/Fix Services
- Business Continuity Plans and Disaster Recovery
- Virtualization and Business Automation
- Network Security

Westcott: "Network security is a vital component that OC-IT offers. Network systems house trade secrets/intellectual property and often times sensitive consumer information as well. OC-IT provides network security programs that help to safe guard our clients."
